

Validation and AI use

Post-freeze working record - incomplete human gates

Independent analysis snapshot: 890b9738c802592abb4e70beb8efc21181fdfcea, frozen October 6, 2026 at 22:53:27.886294 UTC. Its manifest is preserved. Prior FIN439-Labs commit 2e861768f09411764b7859361843389718eb0490 was read only after that freeze. Official course source snapshot: 69eac1e8cbd63b35e801d48d990c4b594bfdbbbc8.

Executed checks and limits

Requirement	Evidence and current disposition
Published known answer	PASS: all 12 official Lab 05 DCF outputs within 0.0001; calculated by the same DCF engine. Published source preserved; not an invented synthetic substitute.
Historical source integrity	32 saved-filing cell checks pass. Balance and cash totals reconcile separately for 2025 and H1 2026. Restricted cash is reconciled through the note; primary representations share the same underlying filing.
DCF and articulation	15 software tests pass: bridge, timing, boundaries, controlled directions, five-year balance/cash ties, unit and restricted-cash contamination, and non-meaningful peer denominators. Working interface tests also pass live change, red failure and reset.
Cold run	Original fresh isolated environment run passed all five commands. First incomplete dependency-pin failure is retained. Postcomparison reproduction is separately logged; do not confuse it with the original freeze.
Economic challenges	Causal cases, WACC-growth grid, named downside, delayed maturity, reverse DCF, one-at-a-time and equal proportional tests. Judgment remains provisional; passing arithmetic does not validate assumptions.
Prior-code audit	Lab 10 reproduces \$34.5344. Negative explicit cash flow is incorrectly clipped in its valuation; the independent engine keeps the sign. Original source unchanged.

Source and date policy

Use October 5 market information; exclude October 6 prices. June reported balances are not claimed to be October balances. Guidance and analyst assumptions are labeled separately. Peer TTM periods end June/July and are not silently treated as identical. Bulk SEC/peer HTTP 403 errors remain recorded; Palantir issuer mirrors are hashed, and blocked peer downloads have reproducible primary URLs.

Named material AI uses and dispositions

Codex in this desktop session authored, executed and maintained the code and draft artifacts on October 6, 2026. Model family exposed as GPT-6; exact model build/version is not exposed. No second AI provider participated in this independent session. Earlier FIN439-Labs attributes work to Claude Code; that is prior supplied provenance, not a new session witnessed here.

Accepted: integrated forecast linkage, cash/statement checks and published DCF arithmetic. Corrected: prospective old-award adjustment to the H2 horizon; working-environment dependency freeze after the first cold-run failure; relative EV minority claim. Qualified/rejected: adjusted margins as a substitute for economic profit; annual EPS shares as a precise dated share count; unsupported NOL exhaustion; negative cash-flow clipping; peer P/E point targets from tiny earnings.

Evidence: official training answers; raw primary filing rows and restricted-cash definitions; actual prior code; independent method definitions. A source-definition check is not an independent audit. Investment judgment, personal reflection and final strategy have not been fabricated.

Locked Changed-Input Record - NOT EXECUTED

Field	Current record
Input and units	Annual capex / revenue: old 1.2%, proposed new 2.0%; hold the stated operating drivers, tax, WACC and terminal convention fixed.
Human prediction / reasoning	PENDING human-authored, AI-off prediction, expected output direction and decision effect. No AI-completed answer is substituted.
Timestamp / immutable precommit	PENDING. The standalone runner records and commits the actual human answer before execution.
Actual result / decision effect	PENDING. The designated capex change has not been run.
Course boundary	The official architecture requires the prediction before AI assistance and an AI-closed run. The prepared code must be run by the student with AI closed to claim this gate.
Prior Lab 11 record	Contains an attributed earlier prediction and Ethan unit/range checks; its retrieved single commit includes both prediction and outcomes. It does not prove a separate pre-run immutable commit.

Authentic contributions and submission gaps

Credit Ethan Heeres only for the supplied Lab 11 exchanges. Lab 10/12 review tables remain incomplete. Need the unchanged official Edition A PDF to assemble Research-Evolution.pdf; the repository Markdown is preserved but not assumed identical to that submitted file. Videos must be real, with corrected transcripts: 3, 5 and 5 minute limits; Video 3 opens with a live bounded-driver/failure/reset demonstration. Private repository and unlisted-video access must be verified for graders. Brightspace deadline/header and the referenced 300-point rubric remain unavailable.

Working source: docs/validation-and-ai-use.md. Supporting logs: validation/published-training-reconciliation.json, source-row-checks.json, cold-run.json, workbench tests, prior-work comparison and immutable source manifests. No final submission-compliance claim.
