Validation and AI use

Working record - human gates incomplete

Independent snapshot 890b9738c802592abb4e70beb8efc21181fdfcea was frozen Oct 6, 2026 22:53:27 UTC; its manifest is preserved. FIN439-Labs commit 2e861768 was read only after that freeze. Course snapshot 69eac1e8. Post-comparison revisions on Oct 20, 2026 are on branch claude/post-comparison-revisions and are not part of the independent freeze.

Executed checks and limits

Requirement	Evidence and disposition
Published known answer	PASS: all 12 official Lab 05 DCF outputs within 0.0001, computed by the same engine.
Source integrity	38 saved-filing cell checks pass; balance and cash totals reconcile for 2025 and H1 2026; restricted cash reconciled through the note.
Articulation and DCF	34 software tests pass: balance/cash ties, income-statement identities, stub cash counted once, award runoff capped, fade engine timing and zero-fade equivalence, WACC > g, contamination rejection, peer P/E 'not meaningful' rule, locked-runner commit isolation.
Cold run	Fresh-environment runs recorded Oct 6 (Windows) and Oct 20 (Linux): validation/cold-run-2026-10-20.json.
Economic challenges	Cases, WACC-growth grid, 0/5/10-year fade, readable reverse DCF, NOL sensitivity, named stresses, one-at-a-time and proportional tests.

Source and date policy

October 5 market data; October 6 prices excluded. June 30 balances rolled to October 5 only by modeled retained cash. Treasury yield, ERP date, beta estimate and wider peer data are pending: the revision session's network blocked those hosts, and nothing was entered from memory.

Named material AI uses and dispositions

Oct 6, 2026: Codex (ChatGPT; model family exposed as GPT-6, exact build not exposed) wrote and ran the independent build. Oct 20, 2026: Claude Code (Anthropic) made the post-comparison revisions after a joint Claude/ChatGPT audit; Pierce is not a coder and did not write code.

Corrected (Claude Code, with evidence): cutoff cash gap (stub FCFF reconciliation); award runoff ended RSU expense early and used a rounded option period (10-Q XBRL 4y10m21d); duplicate fade math with a hardcoded margin; locked runner could commit unrelated staged files. Qualified: 47% margin confirmed GAAP from the 10-Q income statement; 1.4% tax rate is structural (valuation allowance), not one-time. Earlier: adjusted margins rejected as economic profit; negative cash-flow clipping rejected.

Locked Changed-Input Record - NOT EXECUTED

Field	Current record
Input and units	Annual capex / revenue: old 1.2%, new 2.0%; other drivers, tax, WACC and terminal convention fixed.
Human prediction / reasoning	PENDING Pierce's AI-off prediction. Nothing substituted.
Timestamp / precommit	PENDING. The runner commits only the prediction file before computing.
Actual result / decision effect	PENDING. Not run.
Note	The base value moved from $29.76 to the corrected value after the code corrections; the runner reads the current model at run time.

Authentic contributions and submission gaps

Ethan Heeres is credited only for the supplied Lab 11 exchanges. Pending: the unchanged official Edition A PDF, final partner review, three real videos (3/5/5 minutes) with corrected transcripts, grader access (repository currently public; Pierce decides), the Brightspace deadline/header and the 300-point rubric. No final compliance claim.

Working source: docs/validation-and-ai-use.md, docs/claude-code-revision-summary.md, validation/ logs and manifests.
